MS SharePoint Training

MS SharePoint Training

Microsoft SharePoint is a business collaboration platform for various types of enterprises and Web enables them to meet the challenges of the hyper market.

Solutions like, document management, eForms, Workflow, Business Intelligence etc, can be easily developed on the SharePoint platform and widely adopted. Content generation in the form of corporate and private messages, documents and social network related data has thrown open vast challenges in maintenance and management of content. SharePoint plays a stellar role in Content and Document Management spheres. The core of SharePoint is the 'SharePoint Wheel' which offers the complete Enterprise Content Management solution.

HTC ITMR's SharePoint Training Program covers global best practices for implementing SharePoint and complementary solutions. It caters to the needs of Developers, Business Analysts, Corporate Decision Makers, and Customers.

Program Coverage

The courseware for this training focuses mainly on providing 3 levels of immersion to trainees.

- **SharePoint Foundation Course** – Provides an introduction to the SharePoint Wheel, focuses on Sites, Communities, Content, Search, Insights (BI) and Composites.
- **SharePoint Administration Course** – Focuses on Installation, deployment, maintenance and performance tuning of SharePoint Farms.
- **SharePoint Developer Training Course** – Helps technical personnel gain better insight into the SharePoint framework and extend its capabilities. This will help in customizing SharePoint to suit the customer's needs.

Faculty

HTC ITMR's faculty is a judicious mix of eminent professors and well experienced technical and domain experts from the Banking, Financial Services, Insurance, and Publishing Industries having over 15+ years of solutions development, implementation, consulting, and teaching experience. Industry experience makes them understand the pulse of the market better.
